

IMs or Multimedia Chat

IMs or Multimedia Chat is a newly introduced feature, and currently in beta phases.

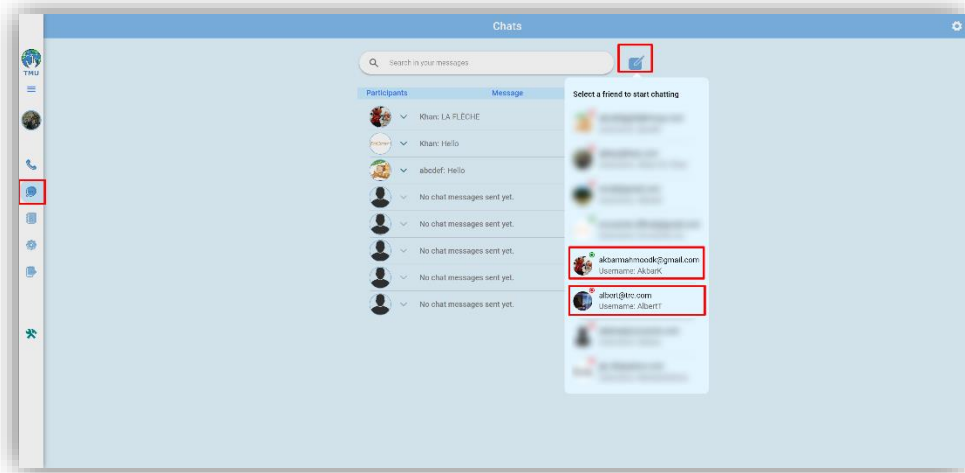

Using this feature, you can get connected with your friends and family on the go, send them texts or multimedia messages, including the audio/video messages, picture messages, and messages in your native language. This feature can also be good for exchanging the file in some common file formats like .pdf, .docx, .pptx, .jpegs, and etc.

You don't need to start any call/meeting to use IMs or Multimedia Chat.

Steps to use that feature:

From the left menu, click on the chat icon, and you will be navigated to the chat section, from there, click on the new chat icon, located in front of the search bar, now choose the contact from the list of friends/contacts you currently have, and start chatting.

Please note that the red dot on top of the username is showing its offline status, while the green is showing the online status for the user.

Offline users will receive the messages when they get online.
